

Industrial Thermal Systems

SOIL-THERM has over 22 years experience custom designing and building the finest, most innovative emissions control equipment on the market. SOIL-THERM continues to provide top quality, dependable equipment, and a commitment to our customers for service and support. We have designed numerous systems for a variety of applications. Our versatile Jet-THERM burner has many uses, from solvent management to emission control, we have the answer.

SOIL-THERM engineers work with you every step of the way to ensure successful integration of our systems with your application. Our systems include automatic controls, remote monitoring and control, stainless steel shell and tube heat exchangers, PLC and touchscreen controls, and small overall footprint takes up minimal space. SOIL-THERM has built systems with flow rates ranging from 100 to 5,000 cfm. But no matter how large your SOIL-THERM system, you will still see an average of 40% fuel savings with our patented combustion technology. Give us a call to discuss your specific application needs!
